

## COVID-19: School Immunizations

Caregivers, it's important to make sure your child is up to date with all recommended immunizations – including this year's flu vaccine. Children may have less severe symptoms, but they can still contract and spread COVID-19. A weakened immune system due to another illness may also make your child more vulnerable to the COVID-19 infection.

- Well-child visits and routine vaccinations can help protect your child against vaccine-preventable diseases such as flu, measles, and Hepatitis A & B.
- For a list of recommended vaccines for your children from birth to 18 years of age, please visit: please visit, the CDC's page: [Vaccine for Your Children](#)
- The Texas Vaccines for Children (TVFC) program provides eligible children vaccines at no cost. Contact your child's pediatrician to see if they participate in the VFC program. To find a participating provider visit, DSHS's page: [Texas Vaccine for Children](#)
